Export Control Statement

This document has Export Administration Regulations (EAR) data with Export Control Classification Number 9E991. No license is required for the dissemination of the information contained herein to foreign persons other than those from or in terrorist supporting countries identified in the United States EAR's (15 CFR Part 730-774). It is the responsibility of the individual in control of this data to abide by U.S. export laws.

Image Disclaimers

Unless otherwise noted, all images of the WindRunner™ aircraft are computer-generated artist renderings, not photographs. No WindRunner aircraft has yet been constructed or flown.

WindRunner Is a Dual-Use Outsized Aerial Logistics Platform

Three Key Verticals with Primary Focus on Onshore Wind Energy

Onshore Wind Energy

Onshore wind energy is constrained by ground logistics, hampering growth in this up to \$10T market thru 2050

WindRunner can solve this transport bottleneck by enabling deployment of blades up to 105m long, as well as other oversized components

Defense

Defense airlift capabilities are rapidly degrading, with no viable replacement planned for aging fleets

WindRunner meets existing mission requirements and can help to make new missions possible

Commercial Cargo

Aging fleets and geopolitical constraints severely limit outsized air cargo options for commercial users

WindRunner can grow this unique market segment with little competition from historical incumbents

Key Verticals: Space, Energy and Extractives, Aviation, Project Cargo

Note: Artist renderings. All loading systems, including ramps, are Ground Support Equipment (GSE)

Source: BNEF, "New Energy Outlook 2024" and Radia management estimates McKinsey & Company, "Space: The \$1.8 Trillion Opportunity for Global Economic Growth," April 2024, RAND, "Reducing Long-Term Costs While Preserving a Robust Strategic Airlift Fleet," 2013

The Potential for Large Scale Onshore Wind Turbines is Immense

Today's Onshore Wind

Future Onshore Wind Turbines

Power available to
convert to electricity

Rotor swept area increases
with the square of blade length

$$P = \rho A v^3 / 2$$

Air density varies with
elevation and temperature

Average wind velocity increases
with height above ground

The Future of Renewables is Big

The Largest Onshore Turbines Ever Built

Saturn V
(111m)

Radia-Enabled Turbine
(250m)

Eiffel Tower
(330m)

Onshore Wind Is Limited by Terrestrial Transportation Constraints

Transport of blades >70m long is often infeasible

Source: Mammoet, "[Record-Breaking Transport of Wind Turbine Blade](#)"
2019 Radia internal analysis using data from USGS Wind Turbine Database. Based on mean distance of U.S. wind turbines to known U.S. onshore wind manufacturing locations. Note: Artist Rendering

Bridge Height and Tunnel Width Pose Insurmountable Transportation Challenges for Onshore Wind

Length is not the only consideration – Tunnels, overpasses and other obstacles impose height and width limits for road and rail

7

WindRunner: Optimized for Volume

Exceptionally Large Payload Bay and Semi-Prepared Field Capable

Key Highlights

Dimensions

108m length
80m wingspan
24m height

Payload, Up to

105m long
8.5m wide
73 metric tons

Runway

Unpaved
1,800m long

Target Fleet Size

150 Aircraft

Note: Artist Rendering

WindRunner Is Designed to Transport Blades up to 105m in Length... and Multiple Smaller Blades at Once

The Future of Renewables is Big

The Largest Aircraft Ever Built

Length: 108m

Wingspan: 80m

Height: 24m

6' Tall Human

45' School Bus

A New Class of Airlift for Giga Logistics

WindRunner Covers Current Airlift Gaps and Generates a New Class of Cargo Capacity

WindRunner offers a new class of Airlift

Visual Comparison

GFEM Approach

WindRunner's unique requirements resulted in an aircraft incompatible with parametric design

Within the first year of design, Radia stood up a finite element approach to estimate structural weight

New Company, No Toolchain

Radia had some of the building blocks, but not an integrated solution

Collier Has It All!

Software provides a customizable infrastructure with tested methods and easy integration

Collier Has It All!

Software provides a customizable infrastructure with tested methods and easy integration

Miles of Stringers

7 miles of stringers ... in the fuselage!

Large OEM Stress Analysts

Radia's Original Stress Analysts

Customized Sizing Routine

Leveraging the Collier API offloaded manual work with efficient automation

Speed!

Leveraging variable step size and parallelization enables quick sizing iterations

150,000 elements

30,000 components

400 load cases

Millions of candidates per component

- Using customized toolset capabilities

Full GFEM sizing iteration in 7 hours¹!

¹ Utilizing 32-core computer for parallelization

WR Is Unique, Collier Provided Value

Key Features

- Extensive Methods and Failure Analyses
- FEA Processing and Exporting
- Verified Methods
- Automation/Customization

Enabled

- Small team
- Convergent mass properties
- Fast sizing iterations
- Complex trade study permutations
